CS Engineering Student | Frontend Developer | Product Builder | UI/UX Enthusiast

PROFESSIONAL SUMMARY

Computer Science Engineering student at G Madhegowda Institute of Technology with a strong foundation in frontend development, UI/UX design, and AI-powered product development. Currently leading FocusFlow, an AI-driven attention and focus tracking app for students, from concept through active development. Passionate about building visually ambitious, interaction-rich interfaces — with a consistent design language spanning glassmorphism, gamification, dark neon aesthetics, and cinematic UI. Comfortable working across the full product lifecycle: ideation, design, frontend build, and pitch.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript (Vanilla), React.js, GSAP Animations, Canvas API

Mobile & Backend: Flutter, Firebase (Auth, Firestore, Realtime DB)

Design & Creative: Canva, Blender, Adobe Creative Suite, Figma, UI/UX Principles, Glassmorphism, Gamification Design

Languages & Data: Python, Pandas, Matplotlib, NumPy, Data Visualization

Tools & Workflow: Git, GitHub, Notion, Iterative Building, Self-Directed Project Management, Google Analytics basics

Other: SEO Basics, Content Strategy, Audience Psychology, A/B Thinking

PROJECTS

FocusFlow — AI Attention & Focus Tracker

2025 – Present

Product Lead | React.js, Firebase, Flutter | 3-person team

- Leading end-to-end product development as Product Lead on a team with a dedicated designer and researcher
- Building an AI-powered app that tracks student attention and focus patterns to improve learning outcomes
- Roadmap spans three phases: web/mobile app (React + Firebase + Flutter) → college system integration → FocusBand wearable device (Phase 3)
- Pitched at IDEARUSH 1.0 ideathon — gained firsthand experience presenting to institutional judges and refining pitch strategy for different audiences
- Identified product framing gap at IDEARUSH: learned to lead with institutional metrics (engagement data, dropout detection, accreditation value) before student-facing benefits

CricketVerse: Aura League — IPL Fan Platform

April 2026

Solo Frontend Build | HTML, CSS, JavaScript, GSAP

- Built a visually ambitious IPL cricket fan site synthesising real player data, anime aesthetics, and neon team theming
- Implemented GSAP animations, half-real/half-anime CSS clip-path profile card effects, and particle canvas backgrounds
- Designed cohesive team-color theming with glassmorphism and Orbitron/Rajdhani font pairing across the full site

InterestVerse — Anime-Themed Social Platform

April 2026

Solo Frontend Build | Vanilla HTML/CSS/JS | Hackathon

- Designed and built a full anime-themed social platform with auth flows, community rooms, mini-games, and chat — all in vanilla JS for hackathon submission
- Implemented a gamified XP/level progression system with micro-animations and interaction-rich UI throughout

- Maintained a unified dark neon design language: glassmorphism panels, particle canvas backgrounds, animated entry states

CodexQuest — Gamified Coding Learning Platform

2026

Solo Concept & Frontend Build | HTML/CSS/JS, Monaco Editor

- Designed and built a gamified coding learning platform with Monaco Editor integration, quest systems, and full RPG stat progression
- Combined edtech functionality with cinematic UI: HUD-style navigation, XP bars, skill trees, and animated level-up sequences
- Reflects sustained interest in the intersection of education, gamification, and emotionally engaging design

Personal Portfolio — Anime/HUD Aesthetic

April 2026

Solo | HTML, CSS, JavaScript

- Iterated through multiple design directions before committing to a full anime/HUD aesthetic — katakana rain, CRT overlays, RPG stat bars, and system-status navigation
- Published at github.com/varshiniv-dev — reflects personal design identity and frontend range

COMPETITIONS & ACHIEVEMENTS

IDEARUSH 1.0 — Ideathon Participant

2025

Presented FocusFlow | GMIT Mandya

- First ideathon experience — presented FocusFlow concept to a panel of college faculty judges
- Key learning: identified judge mindset mismatch mid-pitch; now applying audience-first framing strategy to all future presentations

EDUCATION

Bachelor of Engineering — Computer Science and Engineering

Expected 2028

G Madhegowda Institute of Technology (GMIT), Mandya

INTERESTS & DESIGN PHILOSOPHY

Drawn to the intersection of technology, aesthetics, and emotion — where interfaces feel like experiences, not just tools. Particularly interested in gamification in edtech, anime-inspired UI systems, cinematic interaction design, and AI-driven products that genuinely improve how people learn and focus.
